RE: Comparative hydrophilic ORAC analysis

Brunswick Laboratories (Wareham, MA) was engaged by Eniva Corporation to analyze the antioxidant capacity of its Vibe product and a variety of other liquid nutritional products. Brunswick is an independent, third-party analytical laboratory and does not endorse products

Brunswick tested the following products for their hydrophilic oxygen radical absorbance capacity (ORAC). The results are summarized, below:

	<u>ORAC¹ per fl. oz.</u>
Eniva's Vibe ²	2,600
Young Living Berry Young Juice ²	1,000
Xango ³	530
Himalayan Goji ²	380
Earth's Bounty Tahitian Original Noni ²	165
Sea Silver ²	90

Notes:

¹ micromoles Trolox equivalent

² Test conducted on a single sample of unopened retail product

³ Test conducted on more than one sample of unopened retail product

These values represent the antioxidant capacity of the products tested per one fluid ounce serving.

Based on this test, our analysis demonstrates that Eniva's Vibe has approximately two and one half (2.5) times the ORAC value of the next highest product tested.

The ORAC test is a reliable and recognized standard for the antioxidant capacity of natural products. It shows that Eniva's Vibe delivers a high level of antioxidant power per fluid ounce of product.

Comparative ORAC Report

Page Two

ORAC (Oxygen Radical Absorbance Capacity) measures the ability of a substance to absorb, or quench, the **peroxyl radical**, one of the most important reactive oxygen species in the human body. ORAC has become a popular unit of measure for the antioxidant capacity of nutritional products. There are hundreds of products - from fruits and vegetables to juices and nutritional supplements - that use ORAC as a measure of comparative antioxidant power.

The test performed by Brunswick Laboratories indicates that Vibe, as tested, is a valuable source of antioxidants.

Brunswick Laboratories is the leader in antioxidant testing of nutritional products. In cooperation with Dr. Ronald Prior at the U.S. Department of Agriculture, we are responsible for the development of the ORAC assays. Nutrition industry leaders rely upon Brunswick for antioxidant analysis.

Sincerely,

David Bell
Director of Business Development
